

Prepositions of Time

Below is a text in which the use of prepositions such as: in, on, at, before and after is evident.

The Race Against Time

In the realm of scientific discovery, Dr. Anderson's team had a monumental challenge. They were tasked with inventing a groundbreaking device that could alter time perception. The project commenced on February 1st, and a global summit was scheduled for December 1st at 10 a.m to unveil their invention. In the months leading up to the summit, the team worked tirelessly, often pulling all-nighters. Before the critical experiment on November 20th, they had to ensure every detail was meticulously calibrated. After a nerve-wracking countdown, the experiment took place. The device worked flawlessly, and it was a historic moment. It was a few minutes before the summit's opening when they successfully demonstrated their invention, ultimately altering the world's perception of time.
